

TRADING - ART or SCIENCE ?

When I started trading I thought it's an Art,
As I thought it's all about reading the Chart.
While I moved ahead I was wiped out not once but Twice,
So, I thought market is not fair as I was trading very Nice.

Then I went on the learning journey of Technical Analysis,
When I started again, too much analysis lead me to Paralysis.
Things were still not going my Way,
As I was taking trades in a frenzy and Hay.

Then I joined Advanced InvesTrade Forum,
Forum's philosophy of K.E.I impressed me, as well as its Decorum.
Here I learnt a lot from the various mentors' knowledge Sessions,
Made me strong psychologically with indestructible Impressions.

I then chalked my own path by writing all my trading Process,
And then, started tasting success with newly acquired Prowess.
This made me realize that Trading is actually a Science,
Its 80% Psychology and 20% System to be followed without Defiance.

When you follow the written trading path it's a Science at Work,
But when it becomes part of you it becomes an Art without any Jerk.
So, Science will make you earn your daily bread & Butter,
But when it becomes an Art your orbit will change without any Clutter.

Remember – It's after all going to be your Journey,
The age old adage applies here – “Jaisi Karni, Waisi Bharni”

Bharat Jain

About the Author

Bharat is a management Post-graduate who did his MBA from IMS, Indore. He is now working actively in markets since last 15 years. He came back in markets after initial hit in trading with a mind-set to learn before trading. His core area of working is Elliott Wave Principle.
